PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 16 years of experience building enterprise web applications and the production tools behind them. Builds AI-augmented engineering tools, including a self-healing test system that fine-tunes a local LLM to trace CI failures to root cause. Owns core platform modules and the CI/CD pipelines and observability dashboards that ship them, leading projects end-to-end and mentoring engineers.

EXPERIENCE

Joyent Inc. (a Samsung company), Remote

Senior Full Stack Developer | *April 2019 – Present*

Engineered the UI for Samsung's in-house, AWS-API-compatible private cloud platform, using Vue 3, Pinia, Nuxt, Cypress, and GraphQL.

- Introduced Cypress end-to-end testing across all 13 microfrontends, then built a self-healing test tool powered by a locally fine-tuned LLM (Gemma, via Ollama) that traces failures to root cause using Cypress run history and CI logs.
- Replaced manual review of failure screenshots and videos with AI-suggested fixes, cutting the time to tell a flaky test from a real application bug by roughly 15x, with suggestions about 70% accurate as the model keeps training.
- Owned front-end delivery for the platform's most heavily used microfrontend modules (including EC2, VPC, IAM, Kubernetes, and Secrets Manager), used by roughly 20 internal client teams across Samsung.
- Secured the console with JWT-based authentication via Keycloak, used to authenticate access across the platform's applications.
- Managed the CI/CD pipeline end-to-end, migrating it from Jenkins to GitHub Actions and building automated uptime checks for the platform's most critical application, run on a recurring schedule and after every merge to main.
- Built and evolved the platform's Node.js GraphQL layer over 8 years, writing schemas and resolvers across roughly 25 AWS-compatible services (EC2, VPC, IAM, KMS, ECR, ELB, MKS, and others), and instrumenting it to track error rate and latency separately from generic API failures, feeding Prometheus and Grafana dashboards for real-time health visibility.
- Delivered the team's release management tool, built end-to-end in Python, starting as a CLI and later extended with a full UI (built using Claude Code) on the same Python core, cutting release time by more than 10x over the previous manual process of version-bump PRs, merges, tag creation, and Artifactory verification.
- Ran technical hiring loops and ramp plans for new engineers and interns, evaluating candidates against program and team goals.

ADP LLC, Pasadena, CA

Senior Software Developer | *April 2017 – April 2019*

Developed web and hybrid mobile SPAs for ADP's Wage Payments team, using Angular, React, and Less.js.

- Shipped Wisely Paycard, an adaptive web and mobile application for card and money management for Wisely Card users, using React, Next.js, Redux, Redux Form, redux-observables, RxDB, TypeScript, JSS, and Bootstrap.
- Built practitioner-facing applications for ALINE and Wisely Paycard, used by ADP pay card clients to manage and fund cardholders, using Angular, AngularJS, Less.js, TypeScript, and Bootstrap.
- Built ADP's practitioner and cardholder applications to strict cross-browser compatibility and ARIA accessibility standards, ensuring usability for screen reader users and people with visual impairments.
- Managed technical hiring, interviewing and evaluating candidates for engineering roles on the team.

Morgan Stanley, New York, NY

Frontend Developer | *November 2016 – April 2017*

- Delivered new features and fixed code-level bugs on Access Investing, the firm's Wealth Management platform.

- Recruited specifically for deep CSS/SCSS expertise; resolved a large backlog of styling issues that had persisted for months, significantly cutting the team's outstanding bug count and improving UI consistency across the application.

Consumers Energy, Jackson, MI
Frontend Developer | *April 2014 – November 2016*

Developed web applications spanning ERP, CRM, and HCM systems, and wrote a custom AngularJS framework that let SAP developers with minimal UI experience build interfaces from configuration stored directly in SAP tables, using JavaScript, jQuery, AngularJS, CSS3, Flex, and ActionScript 3.0.

Southern California Edison, Irwindale, CA
Frontend Developer | *July 2010 – April 2014*

Developed single-page applications, hybrid iOS applications, and a custom charting and visualization library for enterprise applications, using Flex, ActionScript 3.0, CSS, and Objective-C.

Atomic Design, Rochester, NY
Web Developer | *February 2009 – June 2010*

Built content management system features and third-party API integrations, including PayPal, FedEx, UPS, and Google Maps, using ASP.NET and C#.

SKILLS

Frontend & UI: Vue 3, Nuxt, Pinia, Vuex, React, Next.js, Redux, Angular, AngularJS, Bootstrap, TypeScript, JavaScript, HTML5, CSS3, SASS, LESS, Responsive Web Design, Cross-Browser Compatibility, ARIA/Accessibility, Microfrontends, Webpack, Vite

APIs, Testing & Backend: GraphQL, REST APIs, Node.js, Python, Go, SQL, RxDB, Cypress, Unit Testing

Cloud, DevOps & Infrastructure: AWS (EC2, VPC, API Gateway, IAM, EKS, S3, Secrets Manager), Docker, Kubernetes, GitHub Actions, CI/CD, Artifactory, Prometheus, Grafana, Keycloak, JWT Authentication, Git, Yarn, NPM

AI Tooling & Practices: Claude Code, Ollama, LLM Fine-Tuning, Agile/Scrum

EDUCATION

Master of Science, Rochester Institute of Technology, 2010

Bachelor of Technology, CET-IILM-AHL, 2006
